

## DEWORMING DAY

09-08-2023

The day is celebrated every year on 10 February to ensure that every child in India is worm free. In some states and Union Territories, the prevalence of Soil-Transmitted Helminths (STH) is greater and that is why the day is marked bi-annually. The National Health Portal considers this initiative as one of the largest public health programs in the country.
